## 1. LOADING DETAILS

The following loading is generally considered in the design of the structural elements.

### PITCHED ROOF PERMANENT ACTIONS

|                                                             |                                      |
|-------------------------------------------------------------|--------------------------------------|
| Tiles                                                       | $w_{Gtiles} = 0.55 \text{ kN/m}^2$   |
| Rafters, Battens and Felt                                   | $w_{Grafters} = 0.15 \text{ kN/m}^2$ |
| Insulation                                                  | $w_{Ginsul} = 0.10 \text{ kN/m}^2$   |
| Plasterboard & Skim                                         | $w_{Gplaster} = 0.20 \text{ kN/m}^2$ |
| Total pitched roof permanent action = $1.00 \text{ kN/m}^2$ |                                      |

### PITCHED ROOF VARIABLE ACTIONS

|                              |                                         |
|------------------------------|-----------------------------------------|
| Pitched roof variable action | $w_{Qsnow pitch} = 2.60 \text{ kN/m}^2$ |
|------------------------------|-----------------------------------------|

### FLAT ROOF PERMANENT ACTIONS

|                                  |                                                                                                           |
|----------------------------------|-----------------------------------------------------------------------------------------------------------|
| Chipping's and Bitumen           | $w_{Gchip} = 0.20 \text{ kN/m}^2$                                                                         |
| Three Layers Felt                | $w_{Gfelt} = 0.10 \text{ kN/m}^2$                                                                         |
| Boarding & Joists                | $w_{Gjoists} = 0.30 \text{ kN/m}^2$                                                                       |
| Insulation                       | $w_{Ginsul} = 0.10 \text{ kN/m}^2$                                                                        |
| Plasterboard & Skim              | $w_{Gplaster} = 0.20 \text{ kN/m}^2$                                                                      |
| Total flat roof permanent action | $w_{Gflatroof} = (w_{Gchip} + w_{Gfelt} + w_{Gjoists} + w_{Ginsul} + w_{Gplaster}) = 0.90 \text{ kN/m}^2$ |

### FLAT ROOF VARIABLE ACTIONS

|                           |                                        |
|---------------------------|----------------------------------------|
| Flat roof variable action | $w_{Qsnow flat} = 0.75 \text{ kN/m}^2$ |
|---------------------------|----------------------------------------|

### CEILING PERMANENT ACTIONS

|                     |                                      |
|---------------------|--------------------------------------|
| Boarding & Joists   | $w_{Gjoists} = 0.30 \text{ kN/m}^2$  |
| Insulation          | $w_{Ginsul} = 0.10 \text{ kN/m}^2$   |
| Plasterboard & Skim | $w_{Gplaster} = 0.20 \text{ kN/m}^2$ |

|                                                                                                                                                                                                                                                                                         |                              |                           |                     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|---------------------------|---------------------|
|  <p>02 Towerfields Westerham Road Bromley, BR2 6HF<br/>Email: <a href="mailto:info@Pearlepp.co.uk">info@Pearlepp.co.uk</a><br/>Website: <a href="http://www.pearlepp.co.uk">www.pearlepp.co.uk</a></p> | Project:                     |                           | Sheet No./Rev.<br>5 |
|                                                                                                                                                                                                                                                                                         | Job Ref.<br>2024-04- SE4 1ES | Structural Engineer<br>MM | Date<br>01-04-2024  |

### CEILING VARIABLE ACTIONS

Ceiling variable action  $w_{Q\text{ceiling}} = 0.25 \text{ kN/m}^2$

### FLOORS PERMANENT ACTIONS

Boarding & Joists  $w_{G\text{joists}} = 0.30 \text{ kN/m}^2$

Plasterboard & Skim  $w_{G\text{plaster}} = 0.20 \text{ kN/m}^2$

Total floor permanent action  $w_{G\text{floor}} = (w_{G\text{joists}} + w_{G\text{plaster}} + w) = 0.70 \text{ kN/m}^2$

### FLOOR VARIABLE ACTIONS

Floor variable action  $w_{Q\text{floor}} = 1.50 \text{ kN/m}^2$

### STUDWORK PARTITIONS

Studs and Noggins  $w_{G\text{stud}} = 0.10 \text{ kN/m}^2$

Insulation  $w_{G\text{insul}} = 0.10 \text{ kN/m}^2$

Plasterboard & Skim  $w_{G\text{plaster}} = 0.20 \text{ kN/m}^2$

Total  $w_{G\text{partitions}} = (w_{G\text{stud}} + w_{G\text{insul}} + w_{G\text{plaster}}) = 0.40 \text{ kN/m}^2$

### BLOCKWORK PARTITIONS

100mm blockwork  $w_{G\text{block}} = 2.20 \text{ kN/m}^2$

Plasterboard & Skim  $w_{G\text{plaster}} = 0.20 \text{ kN/m}^2$

### 100mm BRICK WALL

100 Bricks  $w_{G\text{brick100}} = 2.15 \text{ kN/m}^2$

Plasterboard & Skim  $w_{G\text{plaster}} = 0.20 \text{ kN/m}^2$

### 215mm BRICK WALL

215 Bricks  $w_{G\text{brick215}} = 4.30 \text{ kN/m}^2$

Render & Skim  $w_{G\text{render}} = 0.70 \text{ kN/m}^2$

### CAVITY WALL

|                                                                                                                                                                                                                                                                                         |                                     |                                  |                            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|----------------------------------|----------------------------|
|  <p>02 Towerfields Westerham Road Bromley, BR2 6HF<br/>Email: <a href="mailto:info@Pearlepp.co.uk">info@Pearlepp.co.uk</a><br/>Website: <a href="http://www.pearlepp.co.uk">www.pearlepp.co.uk</a></p> | <b>Project:</b>                     |                                  | <b>Sheet No./Rev.</b><br>6 |
|                                                                                                                                                                                                                                                                                         | <b>Job Ref.</b><br>2024-04- SE4 1ES | <b>Structural Engineer</b><br>MM | <b>Date</b><br>01-04-2024  |

**102 Brick + 140 Block**

$$W_{\text{Gblock}} + W_{\text{Gbrick100}} = 4.35 \text{ kN/m}^2$$

**Insulation**

$$W_{\text{Ginsul}} = 0.10 \text{ kN/m}^2$$

**Plasterboard & Skim**

$$W_{\text{Gplaster}} = 0.20 \text{ kN/m}^2$$

**GLASS**

**15mm thick toughened laminated**  $W_{\text{Gglass}} = 0.38 \text{ kN/m}^2$

SAMPLE PROJECT

2. STEEL DESIGN

2.1 Beam B1 (UB 203x102x23 S355)

Permanent

Wall Load =  $5\text{kN/m}^2 \times 2.7\text{m} = 13.5\text{kN/m}$   
 Floor Load =  $0.75\text{kN/m}^2 \times 7.3\text{m}/2 = 2.7\text{kN/m}$   
 Roof Load =  $1\text{kN/m}^2 \times 7.3\text{m}/2 = 3.6\text{kN/m}$   
 Total Permanent =  $13.5 + 2.7 + 3.6 = 19.8\text{kN/m}$

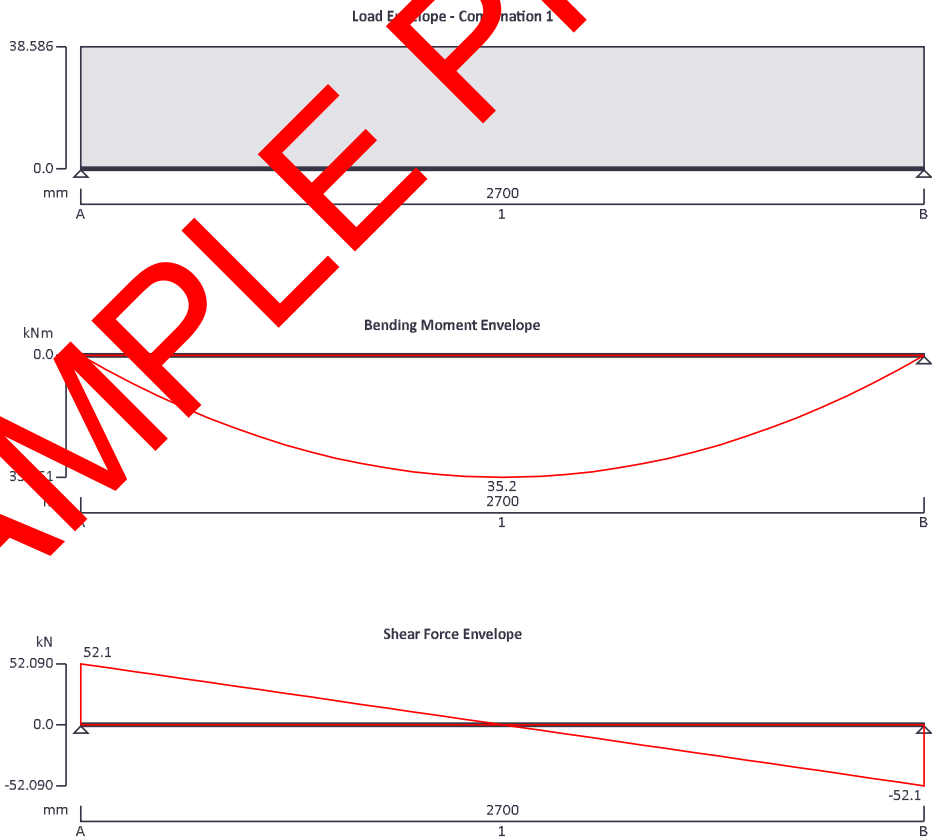

Variable

Floor Load =  $1.5\text{kN/m}^2 \times 7.3\text{m}/2 = 5.5\text{kN/m}$   
 Roof Load =  $0.6\text{kN/m}^2 \times 7.3\text{m}/2 = 2.2\text{kN/m}$   
 Total Variable =  $2.2 + 5.5 = 7.7\text{kN/m}$

#### Partial factors - Section 6.1

Resistance of cross-sections;

Resistance of members to instability;

Resistance of tensile members to fracture;

#### Lateral restraint

$$\gamma_{M0} = 1.00$$

$$\gamma_{M1} = 1.00$$

$$\gamma_{M2} = 1.00$$

Span 1 has full lateral restraint

#### Effective length factors

Effective length factor in major axis;

$$K_y = 1.000$$

Effective length factor in minor axis;

$$K_z = 1.000$$

Effective length factor for torsion;

$$K_{LT,A} = 1.000;$$

$$K_{LT,B} = 1.000;$$

#### Classification of cross sections - Section 5.5

$$\varepsilon = \sqrt{[235 \text{ N/mm}^2 / f_y]} = 0.81$$

#### Internal compression parts subject to bending - Table 5.2 (sheet 1 of 3)

Width of flange;

$$c = d = 169.4 \text{ mm}$$

$$c / t_w = 38.6 \times \varepsilon \leq 72 \times \varepsilon; \quad \text{Class 1}$$

#### Outstanding flanges - Table 5.2 (sheet 2 of 3)

Width of section;

$$c = (b - t_w - 2 \times r) / 2 = 40.6 \text{ mm}$$

$$c / t_f = 5.4 \times \varepsilon \leq 9 \times \varepsilon; \quad \text{Class 1}$$

**Section is class 1**

#### Check shear - Section 6.2.6

Height of web;

$$h_w = h - 2 \times t_f = 184.6 \text{ mm}$$

Shear area factor;

$$\eta = 1.000$$

$$h_w / t_w < 72 \times \varepsilon / \eta$$

**Shear buckling resistance can be ignored**

Design shear force;

$$V_{Ed} = \max(\text{abs}(V_{\max}), \text{abs}(V_{\min})) = 52.1 \text{ kN}$$

Shear area - cl 6.2.6(3);

$$A_v = \max(A - 2 \times b \times t_f + (t_w + 2 \times r) \times t_f, \eta \times h_w \times t_w) =$$

$$1238 \text{ mm}^2$$

|                                                                                                                                                                                                                                                                                   |                              |                           |                      |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|---------------------------|----------------------|

|                                                                                                                                                                                                                                                                                   | Job Ref.<br>2024-04- SE4 1ES | Structural Engineer<br>MM | Date<br>01-04-2024   |

Design shear resistance - cl 6.2.6(2);

$$V_{c,Rd} = V_{pl,Rd} = A_v \times (f_y / \sqrt{3}) / \gamma_{M0} = 253.7 \text{ kN}$$

**PASS - Design shear resistance exceeds design shear force**

#### Check bending moment major (y-y) axis - Section 6.2.5

Design bending moment;

$$M_{Ed} = \max(\text{abs}(M_{s1\_max}), \text{abs}(M_{s1\_min})) = 35.2 \text{ kNm}$$

Design bending resistance moment - eq 6.13;

$$M_{c,Rd} = M_{pl,Rd} = W_{pl,y} \times f_y / \gamma_{M0} = 83.1 \text{ kNm}$$

**PASS - Design bending resistance moment exceeds design bending moment**

#### Check vertical deflection - Section 7.2.1

Consider deflection due to permanent and variable loads

Limiting deflection;

$$\delta_{lim} = L_{s1} / 250 = 10.8 \text{ mm}$$

Maximum deflection span 1;

$$\delta = \max(\text{abs}(\delta_{max}), \text{abs}(\delta_{min})) = 4.4 \text{ mm}$$

**PASS - Maximum deflection does not exceed deflection limit**

**Compressive strength from Table 2 BS5628:Part 1 - aggregate concrete blocks (25% or less formed voids)**

Mortar designation; Mortar = "iii"  
Block compressive strength;  $p_{unit} = 20.0 \text{ N/mm}^2$   
Characteristic compressive strength (Table 2c);  $f_{kc} = 5.55 \text{ N/mm}^2$   
Characteristic compressive strength (Table 2d);  $f_{kd} = 11.05 \text{ N/mm}^2$   
Height of solid block;  $h_{unit} = 215.0 \text{ mm}$  ;  
Least horizontal dimension;  $l_{unit} = 100.0 \text{ mm}$   
Block ratio;  $ratio = h_{unit} / l_{unit} = 2.2$

*Ratio between 0.6 and 4.5 - OK*

Characteristic compressive strength;  $f_k = 11.05 \text{ N/mm}^2$

**Loading details**

Characteristic concentrated dead load;  $G_k = 27 \text{ kN}$   
Characteristic concentrated imposed load;  $Q_k = 10 \text{ kN}$   
Design concentrated load;  $F = (G_k \times 1.4) + (Q_k \times 1.6) = 53.9 \text{ kN}$   
Characteristic distributed dead load;  $g_k = 0.0 \text{ kN/m}$   
Characteristic distributed imposed load;  $q_k = 0.0 \text{ kN/m}$   
Design distributed load;  $(g_k \times 1.4) + (q_k \times 1.6) = 0.0 \text{ kN/m}$

**Masonry bearing type**

Bearing type; Not applicable  
Bearing safety factor;  $\gamma_{b,ms} = 1.00$

**Check design bearing without a spreader**

Design bearing stress;  $f_{ca} = F / (B \times l_b) + f / t = 1.798 \text{ N/mm}^2$   
Allowable bearing stress;  $f_{cp} = \gamma_{bear} \times f_k / \gamma_m = 3.157 \text{ N/mm}^2$

**PASS - Allowable bearing stress exceeds design bearing stress**

**Check design bearing at  $0.4 \times h$  below the bearing level**

Slenderness ratio;  $h_{ef} / t_{ef} = 10.91$   
Eccentricity at top of wall;  $e_x = 0.0 \text{ mm}$   
From BS5628:1 Table 7  
Capacity reduction factor;  $\beta = 0.99$   
Length of bearing distributed at  $0.4 \times h$ ;  $l_d = 1260 \text{ mm}$   
Maximum bearing stress;  $f_{ca} = F / (l_d \times t) + f / t = 0.195 \text{ N/mm}^2$   
Allowable bearing stress;  $f_{cp} = \beta \times f_k / \gamma_m = 3.126 \text{ N/mm}^2$

**PASS - Allowable bearing stress at  $0.4 \times h$  below bearing level exceeds design bearing stress**
